

Storage Consolidation for Lotus Domino

Consolidate Domino Data to Save Money

NetApp® storage consolidation saves you money and supports the continuous operation and success of your enterprise.

Key Benefits

• **SAVE MONEY**

Consolidate data from multiple Domino servers onto NetApp storage systems to improve storage utilization, reduce management overhead, and increase productivity—all of which translate to bottom-line savings.

• **REDUCE COMPLEXITY**

NetApp storage solutions simplify enterprise data operations with a complete data management, distribution, and retention strategy for Domino data—with superior data protection and the ability to scale on demand at a lower incremental cost.

• **GAIN AN INNOVATIVE BUSINESS PARTNER**

Recognized for pioneering a platform that delivers performance, simplicity, and scalability, NetApp unified storage systems work across multiple platforms and storage architectures—Windows®, UNIX®, or Linux®, and NAS or SAN, including support for iSCSI—and offer global, enterprise-class services and support to see you through.

Enterprise organizations that have deployed Lotus Domino require high reliability to support their businesses. Typically, these organizations are also under pressure to manage—indeed, reduce—the cost and complexity of their Domino infrastructures.

NetApp offers a comprehensive hardware, software, and services solution that enables your organization to consolidate data from multiple Domino servers onto NetApp storage systems. This data consolidation saves you money by improving storage utilization, reducing management overhead, and simplifying Domino administration. It also increases productivity by ensuring fast, reliable access to Domino data. And data consolidation on NetApp systems enables you to expand storage quickly and easily, when you need it, at the lowest incremental cost.

The Challenge: Simplify Management and Accelerate Business Operations

The dramatic growth of Lotus Domino data has led to a proliferation of Domino servers, typically with direct-attached storage. This has led to high overhead costs, poorly utilized server and storage assets, and complex and time-consuming backup and restore processes.

Does this sound familiar? If yours is like many enterprise organizations, you're challenged to deliver more IT services to support business demands without increasing overhead. Solving the problem requires an approach that simplifies and stabilizes your IT infrastructure.

The Solution: Consolidate on NetApp Storage Systems

NetApp storage consolidation for Domino data is a complete solution consisting of NetApp storage systems, integrated data management software, and services and support to plan and carry out the data migration and consolidation process.

STORAGE CONSOLIDATION

NetApp storage consolidation solutions are innovative and deliver cost savings, simplified management, greater performance, reliability, and higher availability.

NetApp Storage Systems are based on the NetApp appliance architecture, which surpasses other platforms in simplicity, scalability, and ease of management. NetApp enables enterprise-class high availability, reliability, and business continuance—across multiple platforms and storage architectures: Windows, UNIX, or Linux, and NAS or SAN, including support for iSCSI.

NetApp Software extends to Domino environments the advantages of the NetApp architecture for data protection and data management. It also simplifies administration and increases the productivity of your IT people—enabling them to focus on adding value for users. NetApp Snapshot™ technology enables rapid restores and more frequent near-instantaneous, non-disruptive backups, which lower overhead and cause no performance degradation.

NetApp Services provide global, enterprise-grade service and support to free up your internal resources, minimize disruption, maximize uptime, and help ensure your long-term success. NetApp offers services and support programs to complement every phase of your solution—from evaluation within your environment to installation—including services to maximize your return on investment through the life of ownership.

Benefits from NetApp Innovation

With a NetApp storage solution, you'll save money with improved storage utilization, reduced management overhead, and increased productivity, and you'll greatly enhance the reliability of your Lotus Domino environment. Simplified administration means your IT staff can accomplish more in less time—and focus on tasks that add value for users. And when you need to scale the system, you can do so rapidly—without disruption to applications and end users.

All these benefits lead to the rapid return on investment and lower total cost of ownership characteristic of NetApp storage solutions. As a storage industry innovator known for delivering performance, reliability, and cost savings, NetApp has the products and services to help improve your business operations and your bottom line. And as an innovative business partner, NetApp is committed to enabling the success of your enterprise infrastructure today and for years to come.
